(54) Method of manufacturing a semiconductor device provided with a number of pn junctions separated each time by depression, and semiconductor device provided with a number of pn junctions separated each time by a depression.

(57) The invention relates to a method of manufacturing semiconductor devices whereby a pn junction (2) is provided in a slice of semiconductor material (1) parallel to the main surfaces (3, 6) thereof, after which depressions (4) are provided in a main surface (3) cutting through the pn junction (2), so that mutually separated pn junctions (2a, 2b, 2c) are created, and the slice (1) is split up into separate semiconductor bodies (10) at the areas of some of these depressions (4a, 4c), each body comprising a num-

ber of the pn junctions (2a, 2b), while a layer of insulating material (5) is provided on walls of the depressions (4). According to the invention, the depressions (4) are provided in one main surface (3) only of the slice (1), and the layer of insulating material (5) is provided before the slice (1) is split up into separate semiconductor bodies (10). It is achieved by this that the insulating layer (5) can be applied to the walls of the depressions (4) in a simple manner.
